## DETAILED ACTION

### *Election/Restrictions*

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-22, drawn to a printed wiring board, classified in class 174, subclass 255.
  - II. Claims 23 and 24, drawn to a manufacturing method of a printed wiring board, classified in class 29, subclass 832.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions group II and I are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the product as claimed can be made by another and materially different process. The product can be made by plating the solder instead of printing the solder paste or the product can be made by manually providing solder by a solder torch.
3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, and the search required for Group II is not required for Group I, restriction for examination purposes as indicated is proper.
4. If the product claims, group (I) is elected, the applicant to elect a single disclosed specie, including the claims reading on the elected specie. Group I of this application contains claims directed to the following patentably distinct species of the claimed invention:

Specie I	Specification page 15, line 15: a printed wiring board with auxiliary lead 104, Fig. 1A is arranged between the electronic components 109
----------	---

Specie II	Specification page 17, line 16: a printed wiring board with auxiliary lead 104 as is shown in Fig. 1C
-----------	---

Specie III Specification page 17, line 31 and page 18, line 11: a printed wiring board with auxiliary lead 204B, Fig. 1B is arranged between the signal transmitting leads 205 and with auxiliary lead 204A, 204B Fig. 2 is arranged between the electronic components 209 and the signal transmitting leads 205

Specie IV                      Specification page 19, line 28: a printed wiring board with auxiliary lead 304E, Fig. 3 is arranged at position where the auxiliary lead 304E obstructs the electronic components 309 A and 309B.

4.1 Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, claim 4 is generic.

4.2. Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

4.3. Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

4.4. Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

5. A telephone call was made to Mr. M. Fogarty (Reg. No. 36,139) on July 28, 2005 to request an oral election to the above restriction requirement for application, but did not result in an election being made.

6. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

7.1. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Yuriy Semenenko whose telephone number is (571) 272-6106. The examiner can normally be reached on 8:30am - 5:00pm.

7.2. If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Kamand Cuneo can be reached on (571)- 272-1957. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

7.3. Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only.
